

JETView

Digital Publishing Solution for Aircraft Documentation

JETView is an extensible digital publishing solution designed specifically for the airline industry.

Overview

Over 310 million pages of technical information are published every year in the airline industry. That's a pile of paper nearly 24 miles high. Managing such vast volumes of information can be a costly and challenging process.

Traditionally, many airlines have subscribed to electronic publishing services. The technical information provided via these services, however, is often only updated at set intervals which could mean that the information used by aircraft technicians is not always as current as it could be. With JETView, changes can be made as soon as new information becomes available.

Take Control of the Publishing Process

JETView enables you to take direct control of the publishing process and ensure that your technicians are using manuals that are always complete and up-to-date, accurately reflecting all configurations in your fleet.

Provided as an in-house or hosted publishing service, JETView delivers immediate cost savings for all airlines, large and small.

The browser-based interface ensures that the JETView solution is affordable, maintainable and simple to use, with minimal user training required.

Airlines need to have access to complete and accurate technical information, in a timely manner, so that they can ensure that maintenance tasks are accomplished appropriately. This leads to better on-time performance, better customer service delivery and the ability to maximize revenues.

In addition to publishing AMM, FIM and IPC manuals, JETView can deliver internal Policies and Procedures Manuals and thereby provide employees with a single reference source for all the information they need to do their jobs. This not only improves internal efficiency but it also reduces the possibility of errors.

Specifically tailored for the airline industry, JETView enables airlines to:

- ➔ Significantly reduce the cost of managing aircraft technical information
- ➔ Gain quick and easy access to Aircraft Maintenance Manuals, Fault Isolation Manuals, Illustrated Parts Catalogs and other technical publications via an intuitive web browser interface
- ➔ Search for and find information from data on millions of parts and thousands of maintenance procedures
- ➔ Improve compliance with the FAA's Air Transportation Oversight System (ATOS) requirements
- ➔ Customize and publish technical publications, avoiding the high costs, delays and restrictions associated with other products
- ➔ Do away with supplemental binders and stacks of temporary revisions

JETView is a digital publications solution which helps airlines to reduce the cost of managing technical information and ensure that essential data is kept complete and up-to-date.

The JETView Solution

JETView was developed in collaboration with air cargo services provider ABX Air, Inc. who were looking for a low cost, quality replacement for a third party electronic publishing service that they subscribed to on an annual basis. This service was expensive and only accommodated scheduled updates. As a result, the information used by aircraft technicians was not always as current as it could have been.

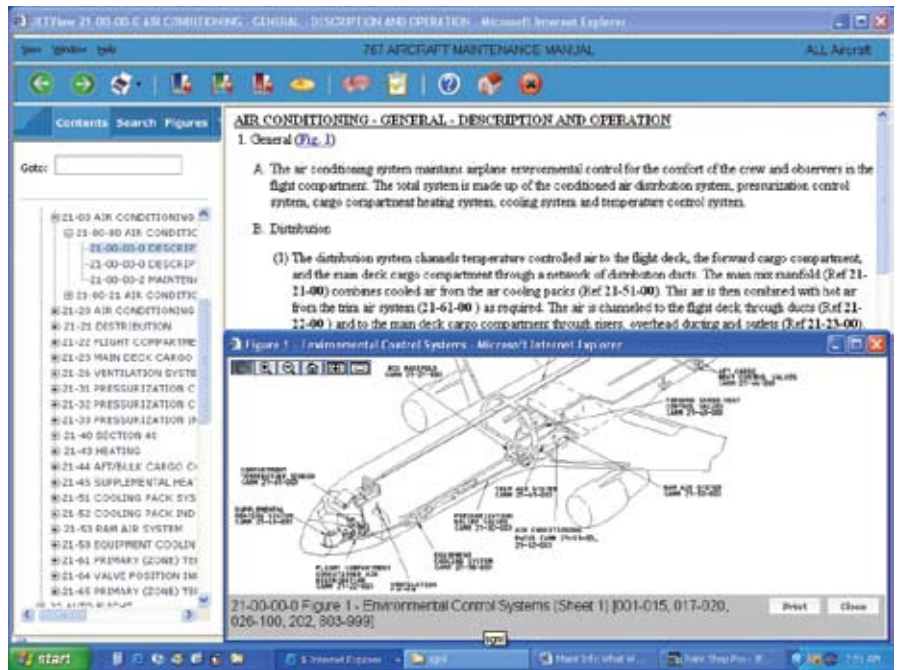

In developing JETView, Stilo's specialist content engineers worked alongside maintenance technicians from ABX Air, Inc. to embed their aircraft industry process and content knowledge.

The solution is based on Stilo's OmniMark content processing platform, a robust and scalable technology that is used successfully by companies across many industries to process large volumes of very complex content.

"Using JETView, we can update our technical documentation as soon as new information becomes available. We are able now to reduce the time required to integrate OEM changes from three weeks to a few minutes."

Jim Guy, Supervisor Maintenance Information ABX Air, Inc.

JETView Features

View:

- ➔ dynamic navigation
- ➔ search capability
- ➔ aircraft effectivity filtering
- ➔ list of figures and tasks
- ➔ bookmarks
- ➔ session history
- ➔ graphics viewing (SVG, CGM, TIFF)
- ➔ change register
- ➔ feedback mechanism

Publish:

- ➔ ATA 2200 Spec, SGML and S1000D XML
- ➔ ATOS management support
- ➔ AMM, FIM and AIPC
- ➔ Policies and Procedures Manuals

Integrated Policy & Procedure Manuals:

- ➔ Your proprietary Policies & Procedures Manuals can easily be integrated into the JETView solution
- ➔ JETView is fully customizable for your business needs
- ➔ Commonly needed aircraft documentation is available all in one place
- ➔ Graphics may be inline or open in another window

ATOS Compliance Module:

- ➔ Monitor your compliance with FAA requirements
- ➔ Search your Policies and Procedures Manuals for answers to SAI questions
- ➔ Link SAI questions to answers located in Policies and Procedures Manuals
- ➔ Maintain historical records of actions taken to address inspection findings
