

Job Title: **QA & Web Developer**
Reports to: **VP, Development & Professional Services**
Location: **Ottawa, Canada**
Job Type: **Permanent**

Stilo International plc, with offices in the UK and Ottawa, is a world leader in XML/SGML content processing technologies, supporting a global customer base in publishing, high tech, government, aerospace and defense.

Our core technologies are the **OmniMark** programming language, a high-performance content processing platform; the **Migrate** cloud content conversion service that enables users to convert documents from proprietary formats such as FrameMaker, InDesign, RoboHelp and Word to XML formats; and **AuthorBridge**, a browser-based authoring tool for creating XML by providing an easy to use interface and converting to XML under the hood.

We currently have an immediate vacancy in our AuthorBridge team for a **web QA tester and front-end web developer**, based in our Ottawa office. This is a junior position. We are looking for a motivated, organized and methodical individual with some industry experience in web testing and web development to help us automate the testing of AuthorBridge. This position will also provide the opportunity to work as a JavaScript programmer, contributing to the on-going development of AuthorBridge.

Candidates will have a demonstrable passion for coding, and ideally be able to provide evidence of open source projects to prove it. You will be working with an outstanding, specialist team of developers who are authorities in a dynamic field and also be dealing with customers who are themselves advanced users of content technologies. We emphasize team work and collaboration at Stilo.

Responsibilities

- Manage, plan and implement tests for AuthorBridge
- Develop and maintain automated testing infrastructure
- Contribute to the AuthorBridge code base by fixing bugs and adding new features
- Integrate AuthorBridge with a variety of 3rd party repositories (VCS and CCMS, proprietary and open source)

Skills and Qualifications

- Web technologies : JavaScript, DOM, HTML, CSS, jQuery, RequireJS, etc.
- Web testing technologies: Selenium, Mocha, Node.js
- Awareness of browser compatibility issues
- Awareness of recent trends in web development
- Effective at debugging JavaScript
- Selenium-based testing
- Solid foundation in computer science
- Operating systems: comfortable and experienced with the Linux platform
- Familiar with version control
- Familiar with XML

SALARY: Competitive.

Please respond with a covering letter, copy of your CV and details of current salary to careers@stilo.com

Applicants must be legally entitled to work in Canada.
