Job Title:	**Senior Web Developer**
Reports to:	**VP, Development & Professional Services**
Location:	**Ottawa, Canada**
Job Type:	**Permanent**

Stilo International plc, with offices in the UK and Ottawa, is a world leader in XML/SGML content processing technologies, supporting a global customer base in publishing, high tech, government, aerospace and defense.

Our core technologies are the **OmniMark** programming language, a high-performance content processing platform; the **Migrate** cloud content conversion service that enables users to convert documents from proprietary formats such as FrameMaker, InDesign, RoboHelp and Word to XML formats; and **AuthorBridge**, a browser-based authoring tool for creating XML by providing an easy to use interface and converting to XML under the hood.

We currently have an immediate vacancy in our AuthorBridge team for a front-end web developer, based in the Ottawa office. We are looking for an experienced web developer with deep and up-to-date knowledge of web technologies. AuthorBridge is a highly complex web application and this will be a challenging and exciting position. The candidate must understand the DOM and be accustomed to making heavy DOM manipulation with JavaScript. The candidate should have significant experience with SPA development and be familiar with the JavaScript ecosystem. A solid foundation in computer science and algorithms is a plus.

You will have a demonstrable passion for coding, and ideally be able to provide evidence of open source projects to prove it. You will be working with an outstanding, specialist team of developers who are authorities in a dynamic field and also be dealing with customers who are themselves advanced users of content technologies. We emphasize team work and collaboration at Stilo.

Responsibilities
- Implement client side functionality of AuthorBridge in JavaScript, with the focus being more on the algorithmic aspects than on presentational ones
- Integrate AuthorBridge with a variety of 3rd party repositories (VCS and CCMS, proprietary and open source)
- Fix bugs
- Keep test suite up-to-date

Skills and Qualifications
- Web technologies: JavaScript, DOM, HTML, CSS, jQuery, RequireJS, etc.
- Web frameworks: any (e.g. ReactJS, Angular)
- Awareness of browser compatibility issues
- Awareness of recent trends in web development
- Effective at debugging JavaScript
- Selenium-based testing
- Solid foundation in computer science
- Operating systems: comfortable and experienced with the Linux platform
- Familiar with version control (Git)

SALARY: Competitive, based upon experience.

Applicants must be legally entitled to work in Canada.

Please respond with a covering letter, copy of your CV and details of current salary to careers@stilo.com
